SELPHYL®
IT'S ABOUT TIME

AUTOLOGOUS SYSTEM FOR
RAPID TISSUE GROWTH

It's Time for SELPHYL®

It's Time for Natural, Lasting Effects

It's Time for Answers

SELPHYL® is a patented system for the safe and rapid preparation of Platelet-rich Fibrin Matrix (PRFM).

Dermatologists and plastic surgeons can use this proven technology to correct the signs of skin aging.

Your dermatologist or plastic surgeon collects a small amount of your blood and through a patented process, separates and concentrates your platelets and fibrin. The resulting PRFM can be applied to rejuvenate and increase skin volume.

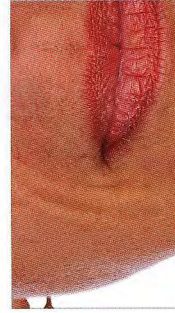

Best of all, this office procedure takes just 20 minutes with no post-procedure downtime.

Nasolabial Fold: Before

Nasolabial Fold: One hour post-procedure

It is thought that SELPHYL® PRFM addresses a root cause of skin aging by triggering the production of new cells and collagen. As soon as SELPHYL® PRFM is administered, growth factors are released into the layers of your skin.

Unlike fillers that use various synthetic substances, the SELPHYL® PRFM uses your natural biology to address skin defects and volume loss.

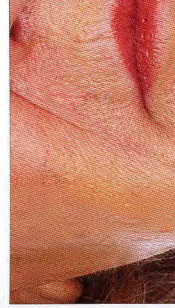

After the administration of SELPHYL® PRFM, patients have seen visible improvement with long lasting effects. Pronounced effects typically occur in approximately three weeks.

Nasolabial Fold: Before

Nasolabial Fold: One hour post-procedure

How does SELPHYL® PRFM differ from fillers?
SELPHYL® is *autologous*; it harnesses the power of platelets naturally derived from your blood.

SELPHYL® PRFM does not contain any animal or synthetic components, so there is virtually no risk of allergic reaction.

How long do SELPHYL® PRFM results last?

Although not permanent, SELPHYL® PRFM offers natural and lasting effects.

When will I see visible results from SELPHYL® PRFM?

It can take up to three weeks to see gradual, sustained volume gain.

How long does the treatment take to perform?

The entire process is performed in your physician's office and takes 20 minutes.

Is there any downtime?

No.

Is there discomfort from the procedure?

SELPHYL® PRFM is a simple, safe, quick, and minimally invasive outpatient procedure. Your physician can use a variety of pain management techniques prior to your treatment to ensure your comfort throughout the process. However, you may experience some transient swelling immediately after your treatment.

Where can I learn more about SELPHYL® PRFM?

You should consult with your physician regarding any aesthetic procedure.
